SIDE A

THE MAIN FEATURE · TRACK LISTING

AMAZON TRAVEL · JUL 2023 — SEP 2025

SIDE II · AMAZON TRAVEL

JUL 2023 — SEP 2025

Hotels · Flights · Insurance — Owner: 4 Java microservices, search → webhook

TENURE · 2Y 2M

BENGALURU, IN

Recorded live on the critical path from first pricing fan-out to post-booking webhook reconciliation. Four tracks, one concept album — re-cut concurrency, harden idempotency, re-paving pipelines, and a quieter pager. Mixed & mastered in production.

- A1 [05:47] CompletableFuture.allOf fan-out with bulkhead ExecutorService pools, replacing serial supplier calls — p90 1.10s → 0.59s (-47%) · traveler conversion +33% across 3 quarters.
- A2 [03:33] Idempotent payment webhook on SQS + Step Functions with a DynamoDB dedupe table keyed by correlation id — killed the double-capture SEV class, drove CPT -43 bps.
- A3 [04:43] Rewrote 6 legacy deploy pipelines into Java CDK with typed constructs & contract tests — rollbacks halved, MTTR -1 day, config drift traced to a single source of truth.
- A4 [05:20] On-call from 20+ → ~5 pages/shift, config-hygiene 5-6 → 0, resolved 150+ incidents, stopped an est. ~30 bps funnel-churn on insurance attach.

SIDE B

DEEP CUTS & LINER NOTES

EARLY SIDES · MAY 2021 — JUL 2023

B1 · SDE I · AMAZON TRAVEL

JUL 2022 — JUL 2023
TENURE · 1Y 0M

Bengaluru, IN — Services, DAOs, and a 60% renewal lift

Side B opens with the session work: **REST** services and **@Repository DynamoDB DAOs** wired up via Spring DI, then shipped the auto-insurance renewal flow with retry + idempotency — +60% renewal completion. Raised the test bar to 80%+ JUnit coverage (JaCoCo, CI-gated).

B2 · SDE INTERN · AMAZON TRAVEL

MAY 2021 — FEB 2022
TENURE · 10M

Bengaluru, IN — GraphQL → Java migration & One-Click Renewal

The demo tape: led a **GraphQL** → **Java** migration for a slice of the insurance quote path, and built **One-Click Renewal** on **Guice DI** with per-module factories. Coverage landed at 90%+ — converted to FTE on the back of it.
