SDE II / Amazon Travel — Hotels · Flights · Insurance

JUL 2023 – SEP 2025 · BENGALURU

Owned four Java microservices across the funnel. *Latency, resilience, quiet on-call.* Java 17 · Spring · AWS · CDK.

01 PARALLELIZED THE HOT PATH.

Refactored serial service fan-out to **CompletableFuture.allOf** with **bulkhead ExecutorService pools** per downstream. p90 fell **1.10s → 0.59s (-47%)**; conversion lifted **+33%**. No new hardware.

02 IDEMPOTENT CAPTURE ON SQS + STEP FUNCTIONS.

Dedupe via **DynamoDB idempotency keys** with TTL; dropped double-capture in renewals. CPT **-43 bps**; saved **~30 bps** of funnel-churn across insurance.

03 CDK-JAVA REWRITE OF DEPLOYS.

Replaced bespoke Python scripts with typed **CDK-Java** stacks and staged rollouts. Rollbacks **halved**, MTTR down **~1 day**, new services bootstrapped in hours.

04 DRAINED THE PAGER.

Rewrote alarms, killed config-hygiene SEVs **5-6 → 0**, on-call pages **20+ → ~5 / shift**. **150+ incidents** authored; stopped **~30 bps** of funnel-churn tied to silent failures.
