BIO

Full-stack engineer, **3+ years at Amazon** (Payments & Travel) — **owned 4 microservices end-to-end**. Java-heavy backend (**Java 17 / Spring Boot**, `CompletableFuture`, bounded `ExecutorService`), idempotent event-driven systems over **SQS + Step Functions**, typed infra in **AWS CDK (Java)**, **React (SSR & CSR) + Redux**.

ABILITIES

♦♦♦ SDE Amazon • Travel (Hotels & Flights)

JUL 2022 – SEP 2025 • BENGALURU

- ♦ **Service Ownership**. Owned **4 customer-facing microservices** (search, listing, room, review) on Spring Boot/MVC — REST + `@Repository` DynamoDB DAOs via Spring DI.
- ♦ **Concurrency Strike**. `CompletableFuture.allOf()` on bounded `ExecutorService`; parallelised 6 partner APIs — p90 **1.1s→0.59s** (**-47%**), conversion **+33%**.
- ♦ **Event Engine**. Idempotent flight-schedule webhook — SQS + DynamoDB dedup + audit; Step Functions booking state machine **-43 bps CPT**.
- ♦ **IaC Summon**. All infra in **AWS CDK (Java)**; migrated 2 services off CloudFormation — **halved** rollbacks.
- ♦ **Ops Mastery**. On-call **20+→~5/shift**; **150+** incidents; **80%+** coverage (JUnit 5 + Mockito).

♦♦ INT Amazon • SDE Intern

2021 • 2022 • BENGALURU

- ♦ Migrated legacy **GraphQL resolvers** → **Java** (API Gateway + Lambda); shipped **One-Click Renewal** (async Java pre-fill); Guice DI, **90%+** coverage.

"The shift you don't notice is the best one." — builds idempotent, pushes back on "just retry it," writes the runbook before the Slack update.
